ABSTRACT

A loader operable to deliver product to a process line. The loader including a buffer section operable to support a printed product and a transfer section operable to receive printed product from the buffer section. One of a plurality of interchangeable nose sections is coupled to the transfer section to receive the printed product and deliver the printed product to the process line. The loader is engageable with a support post of a finishing line to align the loader with respect to the finishing line and/or to supply production support to the loader.
